

HAVE YOU SEEN THIS PLANT?

Grecian Foxglove

(*Digitalis lanata*)

- The leaves are oval to spear-shaped, up to 6 inches long, toothless and tapering to a finer point higher on the stem and wider near the base.

- The flowers are in an elongating spike at the top of the plant, blooming from the bottom of the spike first.

- During the first year, it forms a low rosette of leaves. These leaves are similar to adult leaves but are very hairy at the base.

- The fruit is a pod filled with many seeds and have hooks that attach to anything that passes by.

This is a highly invasive weed and is lethally poisonous to humans and animals.
If you see it, please call your County Weed Director
and report the location of the infestation.
